Inert Advanced Threat Screening Kit – ASK8000

Accurate: Density, X-Ray and WTMD, Z_{eff}

Technology: Metal Detection, Backscatter, Computed Tomography, Single and Multiple X-Ray Generator Systems, mmWave

DSA is a DHS/TSA-accepted supplier.

The ASK8000 Advanced Threat Screening Kit provides a wide array of challenging threat replicas for security officer training and testing. This kit can also be used to test checkpoint equipment detection algorithms to better understand how they function. Inside the kit are various inert concealed IEDs, firearms, explosive simulants, weapons, and bomb components. Each laptop device has an explosive concealed in a different part of the laptop and the knives were chosen based on their design and construction. Every item in the ASK8000 was chosen to test an experienced/veteran security officer's ability to detect prohibited items. The items in this kit were selected to be difficult to identify both during visual inspection and when scanned in an X-ray system. This kit is a good option when honing experienced screener's skills or when conducting penetration testing.
