

Inert Modular Bomb System Kit – MBS1000

Accurate: Density, X-Ray and WTMD, Z_{eff}

Technology: mmWave, Portable X-Ray, Backscatter, Computed Tomography, Single and Multiple X-Ray Generator Systems

Approvals: DSA is a DHS/TSA qualified vendor list (QVL) provider for training aids.

The original MBSII X-ray training kit is used by the Transportation Security Administration (TSA) to train their officers on explosive threat identification in X-ray images. DSA Detection has developed its own upgraded kit based on this design (MBS1000). The kit contains 27 commercial, military, and homemade explosives that are visually and X-ray correct (density and Zeff), as well as 17 different IED circuit components and detonators. Unique to this kit's design is the use of common travel items paired together as threat/non-threat items, which can be used to train operators to spot the unique attributes of modified threat items during everyday screening. DSA Detection's MBS1000 kit provides realistic X-ray training tools that will allow security officers to see and feel inert threats, while evaluating their skills with simulants that perfectly match real explosives.

Due to fluctuating availability of commercial-off-the-shelf (COTS) products, some concealed IED products may vary due to supply and demand at the time of order. Be assured DSA will always supply equal to or better-quality products that meet the technical aspects required.
