

DSA Detection®

Metal Detector Test Kit – TSK7000

ITAR Compliant

DSA Detection®

METAL DETECTOR TEST KIT

Accurate: Density, X-Ray and WTMD, Z_{eff}

Technology: Backscatter, Computed Tomography, Single and Multiple X-Ray Generator Systems, mmWave

Approvals: DSA is a DHS/TSA qualified vendor list (QVL) provider for training aids.

The walk-through metal detector calibration and test objects in this kit are designed to maintain and improve the security of federal buildings, courthouses, correctional facilities and public buildings, and to increase the safety of security personnel. The test pieces allow the walk-through metal detector to be configured to the setting that will best detect the key types of threats being prevented access to the facility. These kits are particularly effective for random testing of operator alertness and training of new detector operators. These kits comply with NIJ Standard 0601.02 "Walk-Through Metal Detectors for use in Concealed Weapon and Contraband Detection using a NAA 22 Disassembled Gun Standard", which was the result of extensive consultation with law enforcement and correction communities. Using this kit allows for the verification that the walk-through metal detector is configured correctly.
