

DSA Detection®

3-Gun Test Kit – TSK7100

Accurate: Density, X-Ray and WTMD, Z_{eff}

Technology: HHMD, Portable X-Ray, Backscatter, Computed Tomography, Single and Multiple X-Ray Generator Systems

DSA is a DHS/TSA-accepted supplier.

The 3-Gun Test Kit is designed to maintain and improve the security of federal buildings, courthouses, correctional facilities, and public buildings, as well as any other secure facility. Inside the case are three test objects labeled as NA-22/TKC0052 (NAA-.22 revolver), DA/TKC0138 (Derringer Model 95), and BR/TKC0511 (similar to the Beretta Jetfire 950). These test objects allow for the configuration and testing of MOST metal detectors, allowing you to determine a machine setting that will detect your most dangerous threat. Each test piece is cast in durable resin to minimize any safety concerns when conducting covert testing.

DSA Detection®

This kit is particularly effective for testing operator alertness and training new operators. There are no bullets included in this kit. It is considered a training or test piece and as such is not labeled as "INERT".

| 3-Gun Test Kit Contents | | |
|-------------------------|---|----------|
| Quantity | Part Name | Part No. |
