

Inert Clothing IED Kit – TSK9540

Accurate: Density, X-Ray and WTMD, Z_{eff}

Technology: mmWave, Portable X-Ray, Backscatter, Computed Tomography, Single and Multiple X-Ray Generator Systems

DSA is a DHS/TSA-accepted supplier.

The Inert Clothing IED Kit was developed to assist screeners understand and recognize modified and altered clothing and braces. Each device in this kit has been identified from a historic suicide IED or a perceived threat. Every item in the TSK9540 contains a complete IED so Instructors can reinforce P.I.E.S. and good search techniques. Because of the discrete modifications made to the original article of clothing, this kit can be used to conduct penetration testing and help evaluate security protocols. The explosive simulants in this kit are density, Z_{eff} , and X-ray correct to replicate the real threats with which they are associated. This kit is intended to identify explosive threats but it can be modified to conceal narcotics or weapons. Contact us for more details.

Due to fluctuating availability of commercial-off-the-shelf (COTS) products, some concealed IED products may vary due to supply and demand at the time of order. Be assured DSA will always supply equal to or better quality products that meet the technical aspects required.
